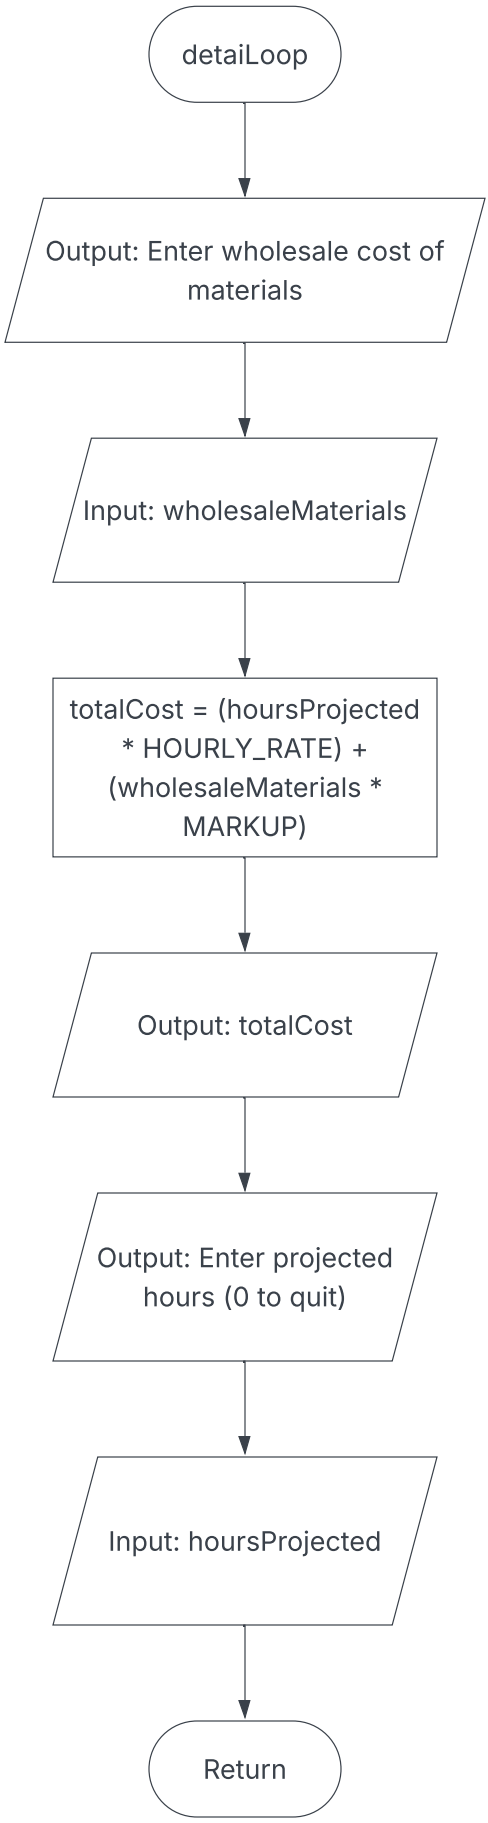
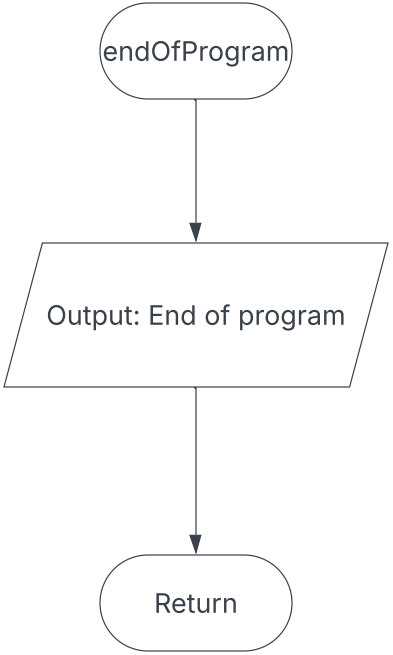
housekeeping
Output: Enter projected hours (0 to quit)
Input: hoursProjected
Return



detaiLoop
Output: Enter wholesale cost of materials
Input: wholesaleMaterials
totalCost = (hoursProjected * HOURLY_RATE) + (wholesaleMaterials * MARKUP)
Output: totalCost
Output: Enter projected hours (0 to quit)
Input: hoursProjected
Return



endOfProgram
Output: End of program
Return

Test Scenario

Hours = 10, Wholesale materials = $200

Labor: 10 x 30 = 300

Materials: 200 x 1.20 = 240

Total: 300 + 240 540

Flowchart result: 540
